TRUE-TO-LIFE FLOORS

The versatile collection of PVC floors from TFD features true-to-life decors. One notable aspect is the use of a register embossing plank finish. By this, we mean that the texture of the plank corresponds to the print. This is also known as Embossed in Register (EIR). Through innovative techniques, the grain is not only visibly enhanced but also adds a tangible depth. This imparts character to TFD floors! The floors boast beautiful textures such as wood, stone, concrete, and marble, available in an extensive color palette.

Our designers find their creative inspiration in nature and keep up with the latest trends in fashion, interior design, and architecture. By combining unique and cutting-edge techniques, color treatments, and layering for plank finishes (matte, glossy, or satin), a surprising collection of true-to-nature floors has been developed.

In this brochure, we showcase the complete TFD Floortile collection along with corresponding installation options. We first introduce our Dryback collection, followed by our trend collections consisting of the Herringbone and Hungarian Point collections. Additionally, our tile collections and the Rigid collection are highlighted. Finally, we feature the unique Woven L+, Touch Leather, our latest PVC-free Balance collection, and the new Nature collection.

We hope that with this brochure and our collections, we not only inform but, above all, inspire!

In our brochure, we have endeavored to depict our collections as accurately as possible. However, colors in print may vary. If you would like to see the collections in person, an appointment can be scheduled at our Experience Center in Dalfsen. Additionally, we can also send color samples of the floors.

TFD A CONSCIOUS CHOICE

A floor directly influences the overall ambiance of a space in a living environment, whether it's a residential area or a workspace. A conscious choice for user-friendliness, quality, durability, and versatility means that the floor also reflects your personality. TFD has been an expert in the production of PVC floors for years. These floors authentically mimic wood and stone, offering warmth and contemporary style, visually pleasing softness, and durable hardness with remarkable sound absorption. With a TFD floor, a space comes to life.

SUSTAINABLE AND FUTURE-ORIENTED

We strive for sustainability, clean production, good working conditions for our employees, and refuse any form of child labor. TFD floors consist solely of so-called Virgin PVCs. These are pure, top-quality PVCs that are not contaminated by lower-quality materials. Our PVC floors can be recycled 100%. This is how we envision the future, taking care of the environment and the well-being of our customers.

SUITABLE FOR RESIDENTIAL AND COMMERCIAL APPLICATIONS

Thanks to the many application possibilities and the wide range of designs, we offer something for everyone with our PVC floors. With installation options such as gluing, just click, loose lay, or our unique magnetic system, you always choose a floor that meets your needs. The TFD system is suitable for use on all types of well-leveled subfloors.

- Easy to maintain and cost effective
- Moisture and dirt resistant
- Sound reduction
- Anti allergic
- Suitable for underfloor heating and cooling
- Environmentally conscious

NEW IN THE COLLECTION

The TFD collection of PVC floors is regularly expanded with new floors, designs, and colors. This year, we introduced our innovative and PVC-free Balance collection to the market. Additionally, we have recently added the Nature collection to our range. You can find our PVC-free Balance collection on pages 74 & 75. The complete Nature collection in long planks is featured on pages 24 & 25. The Herringbone and Hungarian point patterns from the Nature collection can be found on pages 34 & 35.

BALANCE 3617

NATURE HUNGARIAN POINT 211-6

BALANCE 3614

NATURE 237-1

THE TFD DRYBACK COLLECTION

Dryback PVC floors are PVC floors that are directly glued to a leveled surface. Because a dryback PVC floor is glued to the subfloor, it needs to be free of movement and super smooth. A flat sand-cement floor must be leveled and sanded so that no imperfections are visible in the floor. Since the subfloor must be free of movement, a wooden subfloor is not suitable for dryback PVC floors.

Dryback floors consist of strips or tile-shaped parts that are thin and flexible. The wear layer of these floors is covered with a protective layer with a matte appearance. Thanks to the structure of dryback floors, this type of floor is completely maintenance-free; the floor only needs to be cleaned with lukewarm water.

Because dryback PVC floors are thin, the heat from underfloor heating or the coolness from floor cooling can penetrate optimally through the floor. A dryback floor is therefore perceived as very comfortable by people using underfloor heating or cooling. The acoustics are also significantly improved by a dryback PVC floor; PVC is flexible and much less hard than laminate or wood, making it better at absorbing sound and providing a pleasant walking experience. Dryback floors are also a solution if you want the same PVC floor throughout, as they can be used without problems in humid spaces.

We would like to introduce you to our dryback PVC floors on the following pages.

EASY 3

HUNGARIAN POINT 1618

The extensive Style Pro collection from TFD is exceptionally timeless. This no-nonsense collection features a beautiful wood texture and V-grooves on all four sides, making the PVC planks hardly distinguishable from natural materials. The ten designs in this collection consist of lifelike wood tones and several shades of grey. Thanks to the full range of colors, there is a suitable flooring solution for every interior. It's no wonder that the Style Pro collection has proven itself for years as a stable foundation for any interior. The Style Pro collection belongs to the Dryback collection.

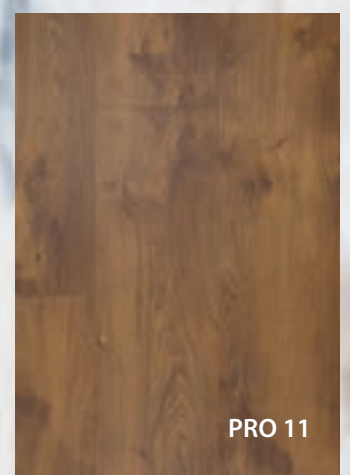

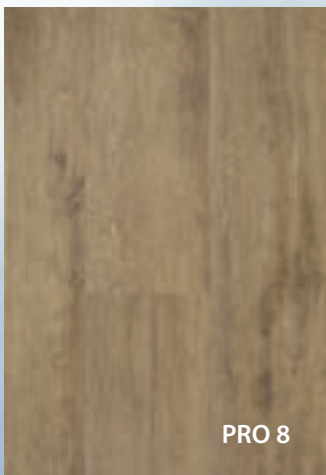

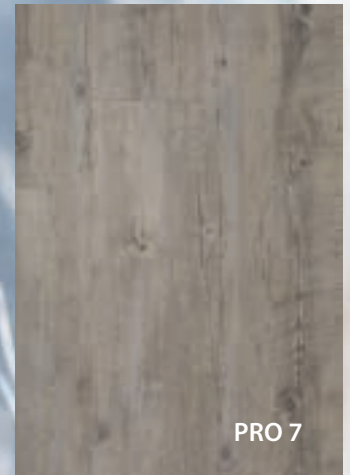

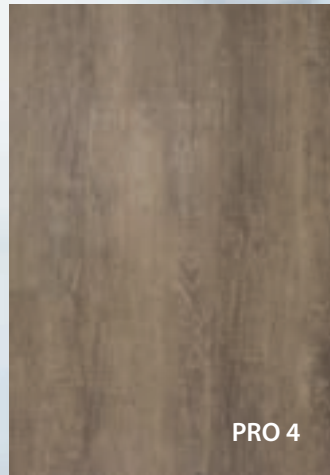

STYLE PRO

Exceptionally timeless

THE STYLE PRO COLLECTION

DRYBACK

This all-around, high-quality floor is excellently applicable for both the residential and project markets.

STYLE PRO

Sizes	228 x 1219 mm
Total thickness	2.5 mm
Protective layer	0.55 mm
Package content	3.34 m ² , 12 planks

Sustainability, safety, public health and the environment are top priorities at TFD. TFD only delivers completely safe PVC floors, equipped with quality certificates that meet the strictest standards.

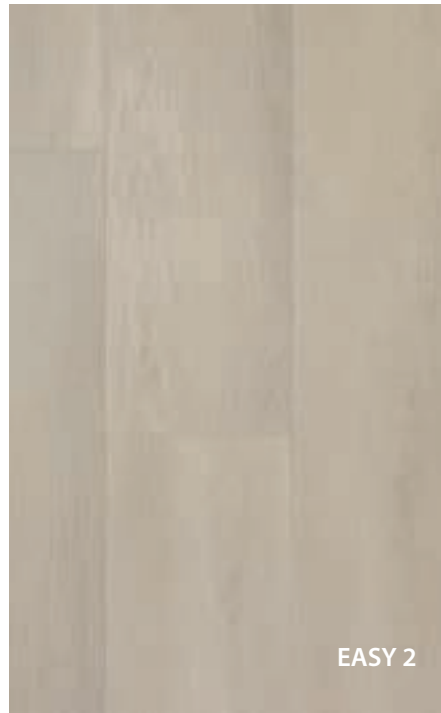

EASY

Uncomplicated enjoyment

THE EASY COLLECTION

DRYBACK

This collection of PVC floors has a light character. The Easy collection reflects uncomplicated enjoyment. Due to its refined texture, this floor is applicable in various interior styles. The Easy effortlessly connects the diverse elements of your interior. This floor easily adapts to its surroundings, giving your interior a soft, inviting, and friendly appearance. Additionally, like all our PVC floors, the Easy is very user-friendly and easy to maintain.

EASY

STYLE 2.5 MM

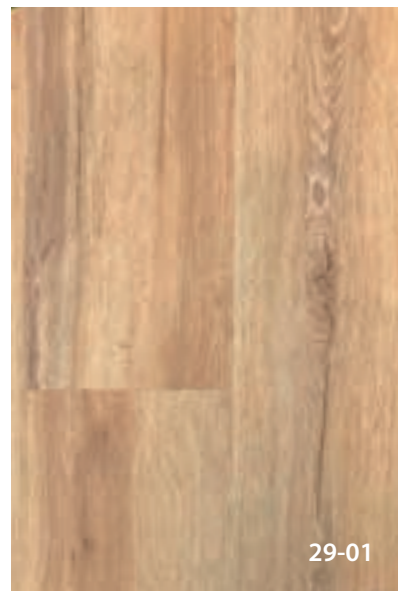

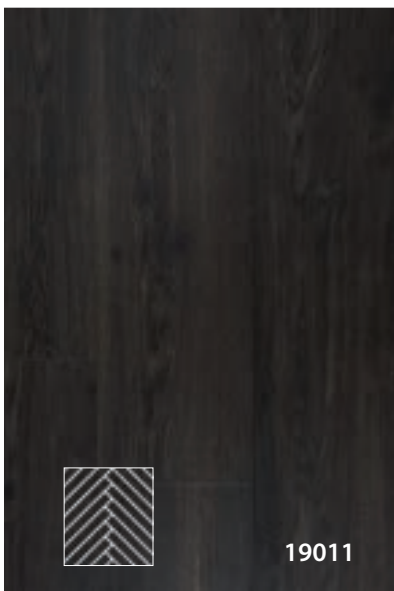

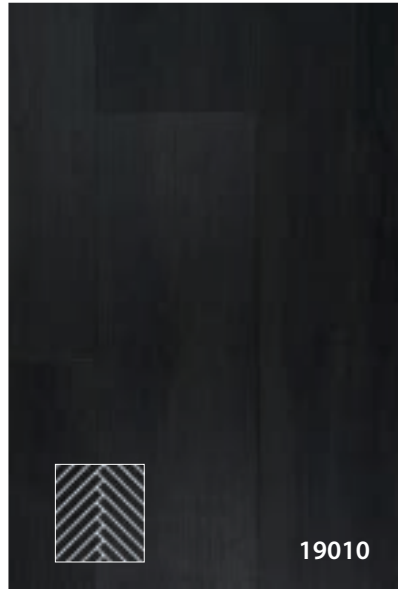

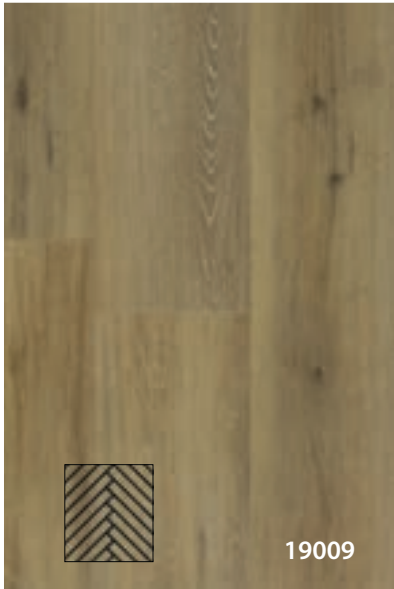

Strong and reliable

STYLE 2.5 MM 19011

THE STYLE 2.5 MM COLLECTION

DRYBACK

The Style 2.5 mm collection can handle extremely high loads. This quality and exceptionally strong 2.5 mm thick PVC floor come with a top layer of 0.55 mm. Due to its stability and wear resistance, this collection is excellently suited for environments where the floor is subjected to a lot of pressure. The wide range of colors in this collection makes the Style 2.5 mm applicable to various interior styles. Choose for tranquility and balance with the light 19009 or make a statement with the dark 19010.

The Style 2.5 MM 19009, 19010 and 19011 are also available in a herringbone pattern.

Give your interior an authentic appearance!

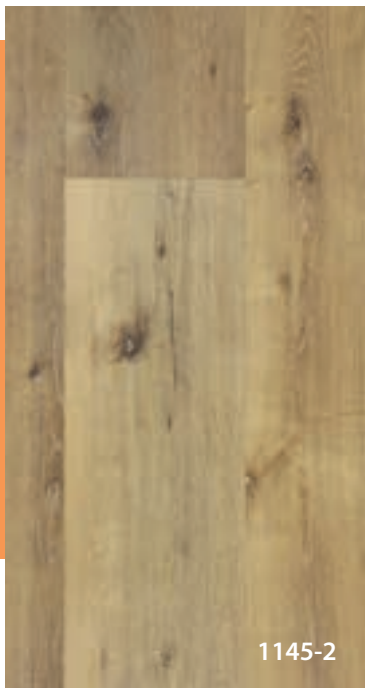

STYLE PRO+
Enhance the visual experience

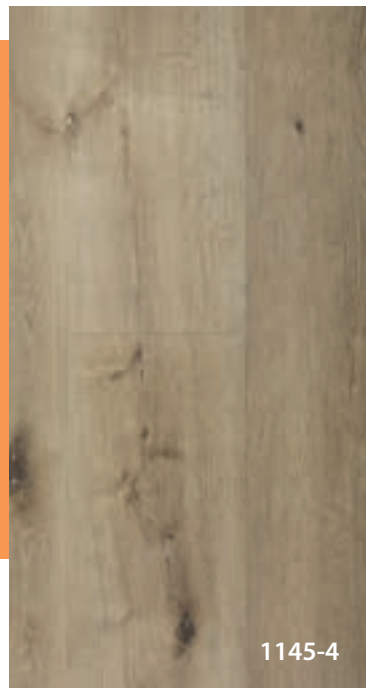

THE STYLE PRO+ COLLECTION

DRYBACK

To make a space appear larger, it is advisable to use longer planks on the floor. TFD has specially curated a collection of planks with a length of 1.5 meters for this purpose. These PVC floors all feature a lifelike wood structure that can be felt due to the embossing applied to the top layer. The four designs from the Style Pro+ collection will significantly enhance the visual experience of a space and give the interior an authentic appearance.

EXPERIENCE

Weathered character

THE EXPERIENCE COLLECTION

DRYBACK

The weathered character of the Experience collection PVC floors reflects a story. The pattern of these planks gives the impression that they have already lived a long life. The appearance of previous treatments enhances this experience. The Experience collection thrives in an industrial living style characterized by natural and rugged elements. With its neutral colors and striking accents, this floor combines well with materials such as metal, steel, leather, concrete, brick, and wood.

REGISTER 3MM

Especially designed for heavy-duty projects.

REGISTER 3 MM 7260-2

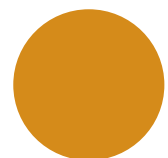

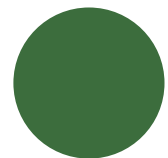

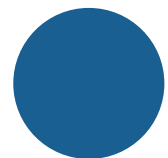

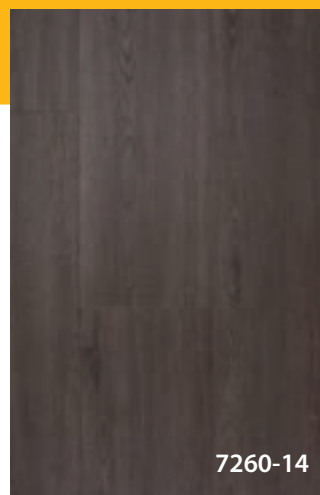

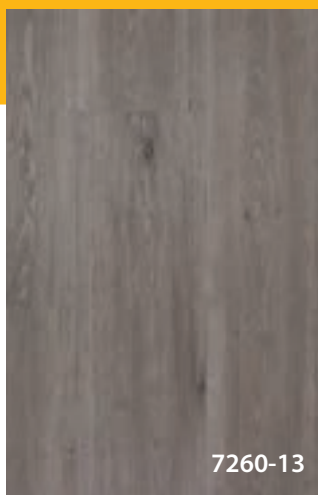

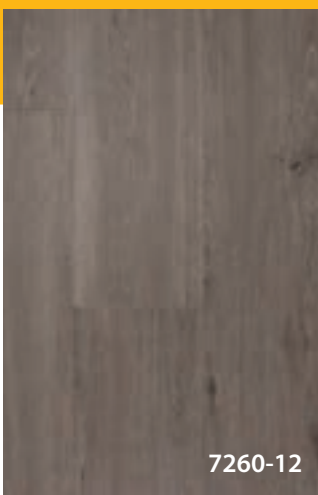

THE REGISTER 3 MM COLLECTION

DRYBACK

The Register 3 mm collection by TFD is characterized by its lifelike appearance. The structure of this PVC floor collection is hardly distinguishable from natural materials. This is achieved by employing a technique called Register Embossing on these planks. In this process, a structure is applied to the top layer that precisely matches the design pattern. As a result, you can feel and see the relief as if it were a real wooden floor. Every grain and knot of the design is perceptible in the structure of the Register planks.

Thanks to the protective layer of 0.7 mm and a total thickness of 3.0 mm, this floor is extremely suitable for use in very heavy-duty projects. Consider hotels, schools, offices, and even within healthcare facilities, this floor can be used perfectly.

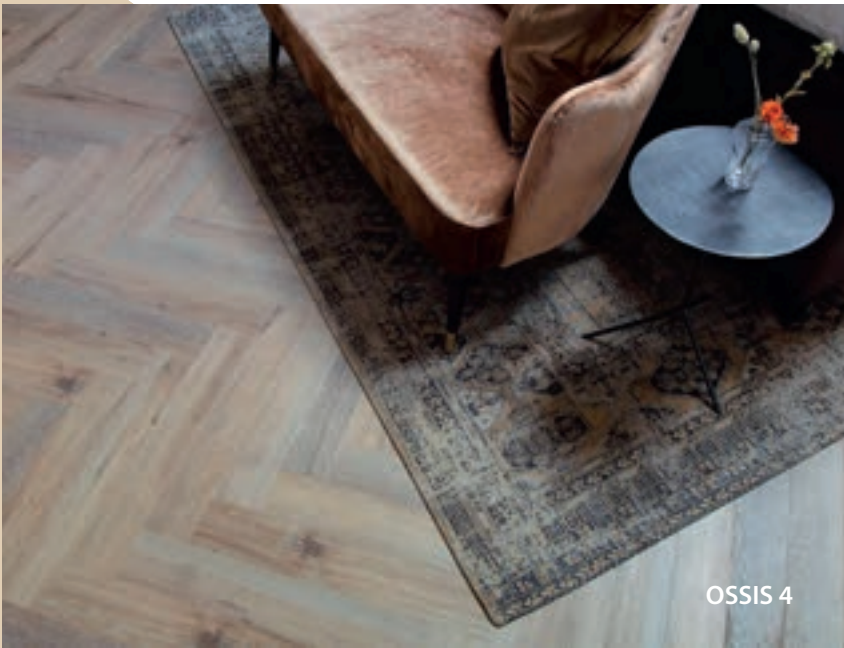

REGISTER 3 MM

Sizes	228 x 1219 mm
Total thickness	3.0 mm
Protective layer	0.7 mm
Package content	3.34 m ² , 12 planks

The Register 3 MM 7260-2 and 7260-3 are also available in a herringbone pattern.

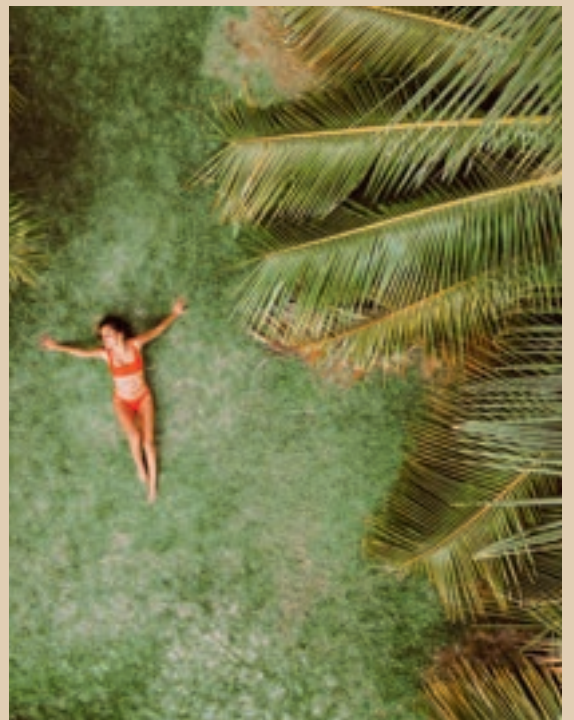

OSSIS 4

OSSIS 6

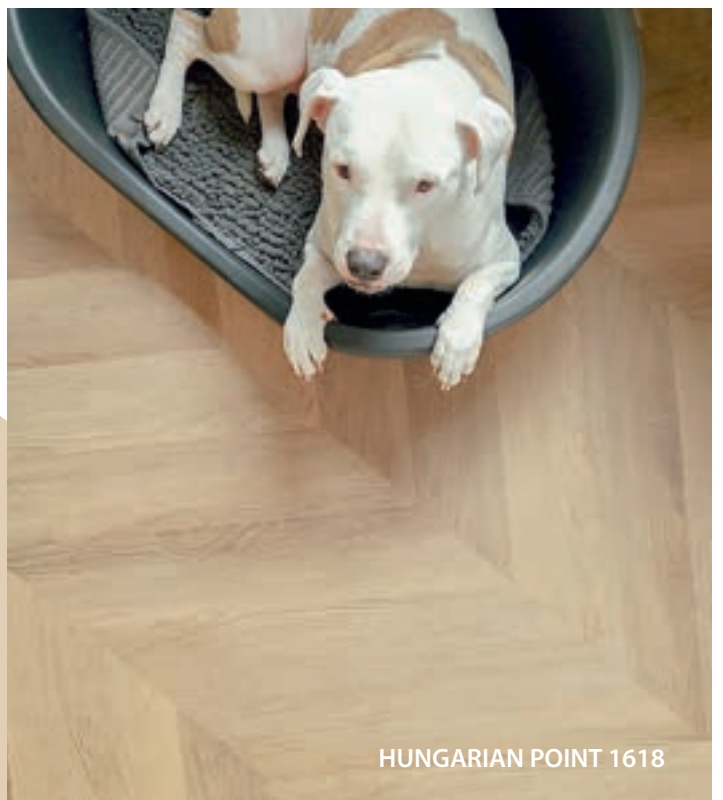

HUNGARIAN POINT 1628

CLASSIC WITH A MODERN TWIST

Both the Hungarian Point and Herringbone PVC floors are true classics with a modern twist. In a herringbone pattern, the planks are laid diagonally and perpendicular to each other. The cascading pattern resembles the bone structure of a fish, hence the name. The slightly narrower planks are laid at a 90-degree angle to each other. With a Herringbone floor, you create dynamism in the space, and the pattern adds a timeless and luxurious feel to your interior.

The zigzag pattern of the Hungarian Point brings visual dynamism to the optical experience of the floor. It is originally a classic laying pattern that is now back in vogue. The Hungarian Point fits well in a sleek and modern interior. Compared to the herringbone laying method, the Hungarian Point visually appears calmer in the space. It is a floor with impact and a distinctive style element in any interior.

OSSIS

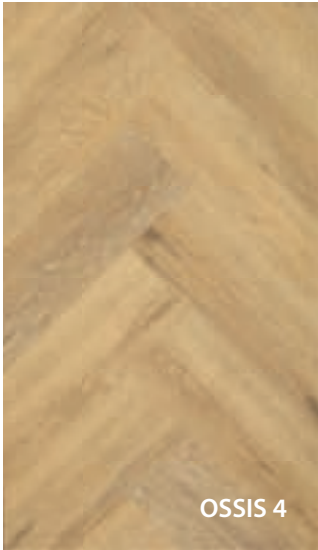

Dynamic and trendy

THE OSSIS COLLECTION

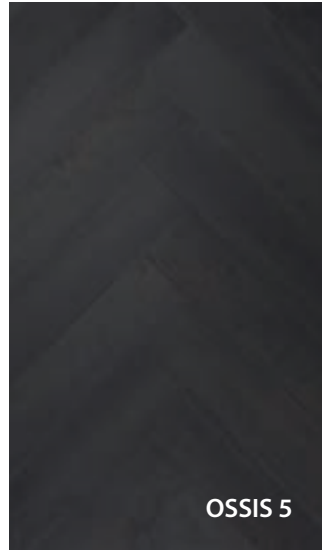

DRYBACK

The Ossis collection from TFD is a floor that can be laid in a herringbone pattern, where the planks are laid diagonally and perpendicular to each other. Additionally, wider planks of Ossis 4, 5, and 6 are available, allowing for the creation of a larger (whale) herringbone pattern.

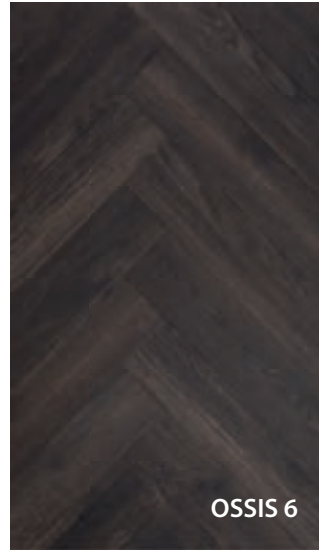

Of course, the floor can also be installed as straight planks or a combination of both. With or without a border strip and joint strip for a beautiful contrast. The collection consists of various color tones that can be combined for a lively appearance. With the Ossis herringbone floor, you create dynamism in the space, and the pattern adds a timeless and luxurious feel to your interior.

INTRODUCING TFD FLOORTILE

How it all began

In the early days, Rob and Monique both held double jobs, and simultaneously, Monique obtained the necessary qualifications to ensure that Rob could start his own independent flooring installation company. During this time, Rob gained extensive knowledge and experience worldwide, evolving into a highly perfectionistic craftsman. In essence, he can create anything, nothing is impossible. With this attitude, they successfully completed many challenging projects, and Monique also joined in working on the floor.

Rob says, "Through my work, I often came home with new ideas, many of which ended up in nothing. But when I introduced the PVC product, Monique saw potential. And we, better than anyone else, understand what the end user wants: decorative, beautiful and above all, practical convenience." Rob's creativity in finding solutions to make interiors more beautiful and practical is a form of creation. Together, they bring an impressive 50 years of craftsmanship to their business, and this is evident in their entrepreneurial endeavors!

Something difficult is not impossible!

The TFD team is an enthusiastic group of people with diverse skills who collectively put TFD on the map. Together, we provide quality, knowledge, and excellent service. We are committed to fostering good collaboration among ourselves and with our customers, contributing to beautiful achievements in the field of PVC flooring in both the residential and commercial markets.

MS CREATIVE STONE 1614

MS CREATIVE STONE 1609

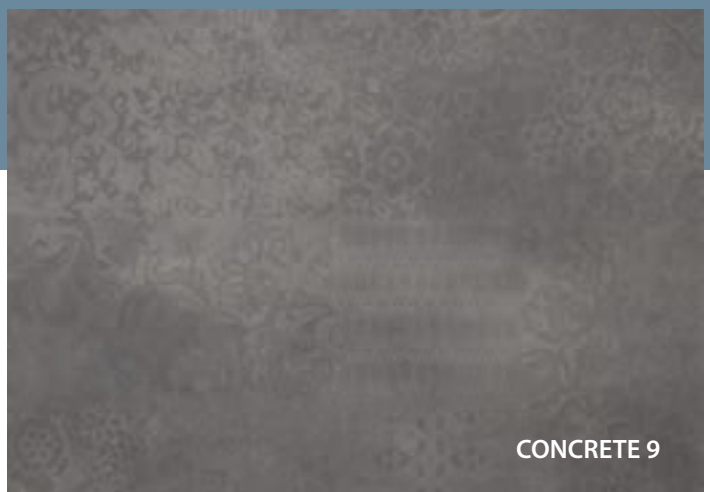

PRO SHARON 4 & 5

NATURALLY WITH A MODERN TWIST

OUR LIFELIKE TILE COLLECTION

With our lifelike tile collections, you bring nature indoors. With the appearance of natural stone, these tiles are indistinguishable from real natural stone tiles, yet you enjoy all the benefits of PVC compared to natural materials. Our tile collections fit well within various interior styles. Whether you prefer a sleek look, a modern industrial vibe, or a rustic feel, it's all possible with our tile collection!

TFD is always on the lookout for innovation. The Artep magnetic tile collection is the result of this pursuit. With the unique magnetic flooring system, a floor is laid over a magnetic foil in the space. The magnetic collection is highly resistant to intensive use. Moreover, they are easy to uninstall, allowing the floor to be taken to another location.

PRO SHARON

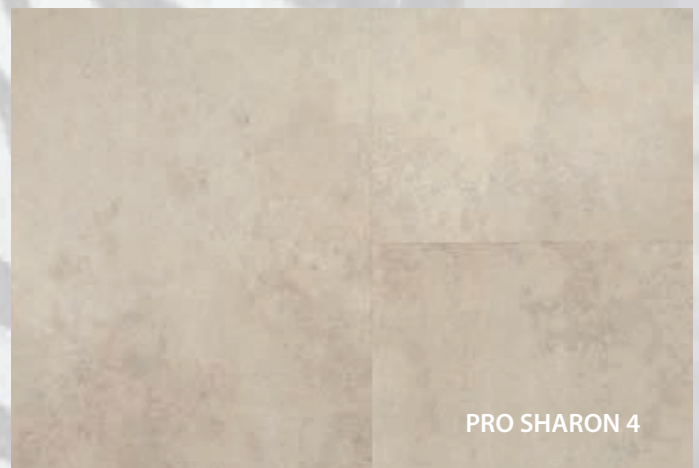

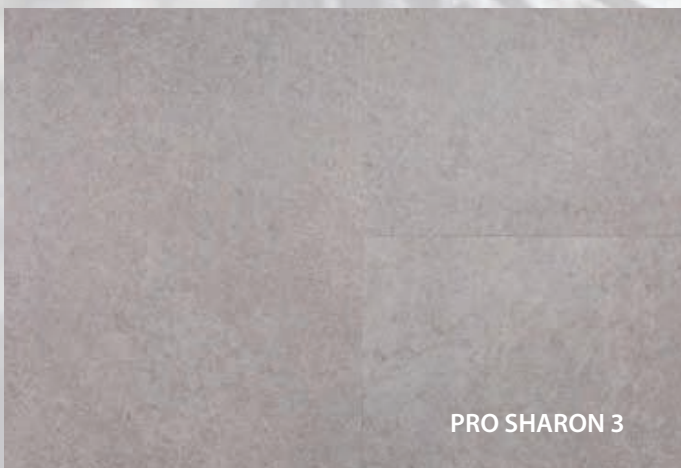

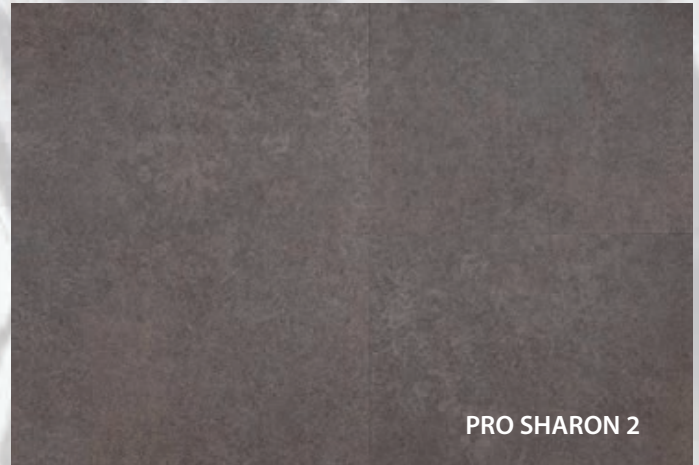

Dare to combine

PRO SHARON 4 & 5

OUR RIGID JUST CLICK FLOORS

ENJOY YOUR TFD FLOOR EVERYWHERE.

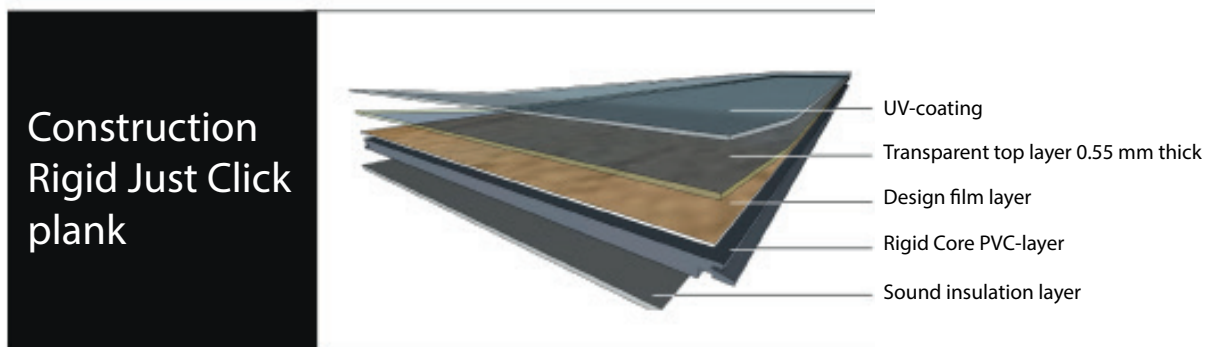

Rigid Just Click floors are stone, polymer, or composite floor panels with a PVC top layer, equipped with a click system. These floors are floating and do not need to be glued, unlike the case with glue-down (dryback) PVC planks.

Often, there is no need for leveling, and Rigid Just Click floors can, in many cases, be installed over an existing hard floor. This is provided that the subfloor does not exhibit significant height differences (more than 3 mm). This allows for a relatively quick and easy installation.

Another significant advantage of these Rigid Just Click floors is that they can be easily disassembled and taken with you, for example, in the case of a move.

The robust Rigid Just Click PVC floor is suitable for both residential and commercial markets. Rigid Just Click floors combine the best of both worlds: the user-friendliness of PVC and the easy installation process of a click floor.

Under the Rigid Just Click floors, you'll find the Rigid Core collection, the Steady collection, the Elements collection, and the Living collection.

The Rigid Core collection from TFD is characterized by its lifelike appearance. The structure of this PVC floor is hardly distinguishable from natural materials. This is because a technique, known as Register Embossing, has been applied to these planks. In this process, a texture is applied to the top layer that precisely matches the pattern of the design. As a result, you can feel and see the relief as if it were a real wooden floor. Every grain and knot of the design is reflected in the structure of the Rigid Core planks.

RIGID

LIVING
Something for everyone

LIVING 1613

THE LIVING COLLECTION

RIGID JUST CLICK

The Living is part of the Rigid Just Click collection. The airy appearance of the Living creates a homely atmosphere. This PVC floor is well-suited for vibrant interior styles and, with its neutral color scheme, provides cohesion in the space. The Living can effortlessly be combined with colorful and soft materials, giving your interior an optical, warm, and radiant character. Additionally, the length of the extra-long planks (1.79m) enhances the visual perception of the space.

Rigid Just Click floors are floor panels with a PVC top layer, equipped with a click system. These floors are floating and, therefore, do not need to be glued. Often, there is also no need for leveling, and the floor can be placed over an existing hard floor in many cases.

DARE TO MAKE A STATEMENT

This floor seamlessly integrates design with technology. The Woven is crafted from woven PVC yarn. Due to its robust fiber and fine weaving, the floor is highly suitable for heavy use and boasts durability in terms of lifespan. The EPT top layer treatment provides antibacterial protection. The floor's surface feels soft and is sound-absorbing, easy to clean, and resistant to discoloration. Additionally, the reliable EPT core structure contributes to the stability of the Woven.

For the production of this floor, a formulation without phthalates as plasticizers is used. Instead, alternatives have been chosen that have been deemed non-harmful to public health and the environment.

The Woven L+ collection is available in the Ombre series and the Herringbone series. The Ombre series is characterized by elongated color gradients, while the Herringbone collection features a subtle herringbone pattern woven into the floor.

The Woven L+ collection is part of the Dryback collection, meaning that these floors need to be glued during installation.

Creative outburst

THE WOVEN L+ OMBRE COLLECTION

DRYBACK

The Woven L+ Ombre collection is made from woven PVC yarns and imparts a warm and inviting atmosphere to your interior. The weaving technique provides the luxurious feel of carpet while offering all the advantages of a PVC floor. The collection features an EPT top layer treatment that not only provides antibacterial protection but also contributes to the floor's stability. This makes the floor suitable for very intensive use and ensures durability over its lifespan. The surface of the floor feels soft, is sound-absorbing, easy to clean, and protected against discoloration.

The designs of the Woven collection with natural color variations are coordinated, allowing them to be easily combined. This offers creative possibilities to mix and match, enabling the creation of unique patterns. Depending on the angle of light, this floor changes its appearance, creating a playful effect.

BLACK & WHITE

Sizes	457 x 457 mm
Total thickness	3.0 mm
Protective layer	0.7 mm
Package content	3.34 m ² , 16 planks

OUR MOST SUSTAINABLE AND PVC-FREE COLLECTION - TFD BALANCE

ENVIRONMENTALLY FRIENDLY, INNOVATIVE AND RECYCLABLE

In times where sustainability plays an increasingly significant role, it is logical for a company like TFD, which is deeply committed to nature, to include a modern, sustainable, and PVC-free collection in its product portfolio.

Despite its low total thickness of only 2 mm and a wear layer of 0.3 mm, this collection has a service class of 43! This is the same service class as design floors with a 0.7 mm wear layer. Additionally, the Balance collection is easy to install without the use of special adhesives, making it versatile in various applications.

In the production of our Balance collection, 20% to 33% fewer natural resources are consumed. TPU and modified PET are used as raw materials, the same materials used to make drinking bottles and in the production of children's toys and playground equipment. The halogen-free collection consists of a polymer blend with very high abrasion resistance (T-class) and scratch resistance (6 - 10 N). Polymer blends are highly resistant to chemicals and prevent bacteria from multiplying on the surface. This makes the Balance collection highly suitable for use in hospitals, offices, schools, healthcare facilities, and gyms.

Of course, our Balance collection is free of chlorine compounds or other pollutants. All of this is, of course, documented within patents.

The building blocks of our PVC-free Balance collection

Our Balance collection is characterized by the following qualities:

- Very high wear resistance (T-class) and scratch resistance (6 - 10 N)
- Free from chlorine and heavy metals
- High dimensional stability (shape retention)
- Up to 50% less use of natural resources in production
- Waterproof
- Very low VOC (volatile organic compounds) emissions
- Good electrical insulator
- 100% recyclable
- Can be glued with, among others, Uzkin KE2000S, KE60 and KE68

Our Balance collection is suitable for the following projects:

- Very heavy-duty projects (hospitals, schools, gyms, etc.)
- Projects where a VOC certificate is required (Indoor Comfort Gold, AgBB/ABG, LEED, BREEAM)
- Residential use

The Balance collection holds the following certificates:

- CE
- REACH
- Blue Angel
- FloorScore
- IAC

The Balance collection features a beautiful wood structure and V-grooves on all four sides. The collection is available in seven different color tones, ranging from neutral and natural light tones to darker tones that allow you to make a statement in your interior. Bring nature indoors with our PVC-free Balance collection.

Our floors are ready for the future!

The designs of TFD floors are inspired by elements from nature, reflected in the embossing structure of the plank surfaces, giving the entire collection a lifelike appearance.

Moreover, sustainability, safety, public health, and the environment are top priorities at TFD Floortile. Throughout the entire production process, the company maintains a focus on choices that prioritize environmental and public health concerns.

TFD offers a diverse range of PVC floors, from calm designs like Easy and Futura to those with a more robust appearance like Firm and Experience. The Ossis collection presents beautiful herringbone floor options with both narrower and wider planks, and the Hungarian Point allows for various laying patterns. The Creative Stone collection features extra-large tiles with an oxidized copper look, while the Woven L+ collection offers a woven PVC floor, providing numerous creative possibilities. The Heritage collection, characterized by its distinctive design, is available in three different widths, allowing for dynamic effects or a more serene look in interiors. TFD's PVC floors are available as glue-down, Rigid Just Click, or magnetic variants.

Emphasizing safety and environmental responsibility, TFD Floortile exclusively provides safe PVC floors with quality certifications (DiBt Ü-Zeichen certificate & CE certification TÜV Rheinland), meeting the strictest standards. The production process reflects the commitment to pure raw materials, including being phthalate-free. Additionally, the company demonstrates care for the well-being of all involved in the work conditions, contributing to society both in the short and long term.

SUSTAINABILITY IS OUR TOP PRIORITY

ECO-FRIENDLY, INNOVATIVE, AND RECYCLABLE

Corporate Social Responsibility and Sustainable Entrepreneurship are in our DNA

Social responsibility and sustainable business have been ingrained in TFD's DNA from the very beginning. Rob and Monique have always felt a strong connection to nature and society. As a result, since the inception of TFD, prioritizing these values has been of the utmost importance. TFD exclusively delivers completely safe PVC floors, equipped with quality certificates (DiBt Ü-Zeichen certificate & CE certification TÜV Rheinland), meeting the strictest standards. Throughout the production of our products, we see this commitment reflected in choices such as using pure raw materials (including being Phthalate-free).

People and nature

In addition, the concern for our fellow human beings is evident in the working conditions of all involved. TFD avoids the dangerous game between price fighters and delivering poor quality by ensuring quality assurance. "We only do something if it's done well; otherwise, not." This makes TFD progressive and 100% reliable. The conviction is to inflict as little damage as possible to the environment; after all, at TFD, we love nature.

100% Recyclable

The TFD products consist solely of so-called virgin PVCs, meaning they are the first-quality PVCs, pure and not contaminated with lower-quality materials. This means, among other things, that these qualities can be ground and recycled to build another product.

Energy

At TFD, we focus on reducing energy consumption, both electricity and gas. Also, when expanding or replacing the (leased) vehicle fleet, the energy class is taken into account. By engaging in socially responsible and sustainable business practices, TFD aims to contribute to society and the environment in the short and long term.

STRIPS

Enhance your floor with TFD strips to add an extra accent. You can place the strips between the planks for an exciting detail.

Black: 2.5 mm thick - 0.3 x 91.4 mm

Grey: 2.5 mm thick - 0.3 x 91.4 mm and 3.0 mm - 0.3 x 91.4 mm

Silver: 2.5 mm thick - 0.3 x 91.4 mm and 3.0 mm - 0.3 x 91.4 mm

Brown: 2.5 mm thick - 0.3 x 91.4 mm and 3.0 mm - 0.3 x 91.4 mm

Gold: 2.5 mm thick - 0.3 x 91.4 mm

OTHER PRODUCTS

EVERYTHING TO INSTALL AND MAINTAIN YOUR TFD FLOOR PROPERLY

TFD Roller adhesive

TFD has developed a special adhesive for their PVC floors. This adhesive allows you to quickly and securely bond your floor to the substrate, whether it's an existing leveled concrete floor or an underlayment. The TFD Roller Adhesive is designed for ease of application and use. Even with frequent use of rolling office chairs, your floor will stay securely in place. Gluing is a fast installation method, and the PVC floor can be easily replaced. This environmentally friendly adhesive is solvent-free and does not contain allergens.

LVT FIX 1.8

This 1.8mm underlayment provides a solid foundation for our collection of PVC floors. The self-adhesive side allows the PVC planks to be directly laid on it. Additionally, it ensures a smooth base, eliminating the need for leveling in the case of irregularities less than 0.3mm. This allows for the entire floor to be installed in a single day. In addition to its sound-absorbing properties of 15 dB, thermal resistance, and moisture protection, this underlayment has excellent dynamic loading capacity. The LVT FIX is also well-suited for underfloor heating systems.

James maintenance products

A TFD PVC floor is easy to maintain. Regularly vacuuming and maintaining using James products keeps the floor looking like new. So no (expensive) bi-annual polishing is necessary! Your floor will remain beautiful without any extra work.

Staircase renovation by TFD Floortile

TFD Floortile proudly presents the latest addition to its product portfolio, the TFD PVC overlay steps. In times where sustainability plays an increasingly important role, it is only logical that an environmentally conscious company like TFD Floortile realizes sustainable solutions where existing elements can be preserved.

When the base of a staircase is still in good condition but, for example, requires significant maintenance, a completely new look can be achieved with the PVC overlay steps. The TFD PVC overlay steps are delivered as large sheets with a width of 1000mm, 1280mm or 1380mm. The sheets have a height of 63mm, a depth of 665mm, and a thickness of 12mm. This means that most sizes of steps can be easily covered. With the TFD PVC overlay steps, you can cover both closed and open stairs.

Sustainable and recyclable

TFD floors are made from so-called Virgin PVCs. This means that they are the first-quality PVCs, pure and not contaminated by lesser qualities. This means that our PVC floors can be recycled 100%, creating another product in the process. This is how we think about the future!

Anti-Allergy

TFD's comfortable floors are moisture and dirt-resistant and come with an extra durable PU top layer. For individuals (and pets) with allergies, it is crucial that the floor is clean. Due to the closed surface of the PVC floor, dust mites and dirt cannot accumulate, preventing the triggering of allergic reactions. Another advantage of the TFD PVC floor is that the bacteriostatic property of PVC prevents bacteria on the floor from multiplying.

Suitable for underfloor heating and cooling

TFD's PVC floors are particularly suitable for use with underfloor heating. And in combination with the right underlay, you can make efficient use of this warmth. The guideline for PVC is that the temperature at the bottom of the floor should not exceed 27°C. Another advantage of the TFD PVC floor is that the reverse also works. The floor is extremely suitable as a cooling option in the summer. This way, you always have comfortable warmth or cooling in your home.

Moisture Resistance and Maintenance

All TFD PVC floors are water-resistant, making them highly suitable for use in humid areas such as the kitchen or bathroom. Even if you have pets, TFD's PVC floor is easy to maintain and clean after an accident. Regular vacuuming is of the utmost importance. Optionally, you can mop the floor afterward with a pH-neutral cleaner without soap residue.

USP'S OF A TFD FLOOR

Shock-resistant and sound-absorbing

TFD PVC floors are suitable for frequent and demanding use. They can withstand high point and pressure loads. Thanks to the hard, wear-resistant layer, you can confidently walk on the floor with high heels. When moving furniture, you don't have to worry about unsightly pressure points. However, it's essential to have good felt pads attached under the legs for protection. A TFD PVC floor minimizes sound transmission and complies with international sound standards. You can peacefully read a book while children play or watch TV in the adjacent room.
